Summary

A C++ Game Programmer with over 2 years in the industry, having worked as a Junior Programmer and a QA Tester.

Credited on multiple projects including **NUTMEG!** and **Still Wakes the Deep**.

Solid understanding of all aspects of real-time software development.

Possesses a 3 year background in scientific technical leadership and technology in both chemistry and infectious biology laboratories.

Experience

Sumo Digital

Apprentice Programmer

Oct 2023 - Jul 2025

- C++ gameplay and engine programming on the 1980s inspired football management game 'NUTMEG!' released in March 2026.
- Proficient in C/C++ primarily working with and contributing to an in-house game engine.
- Wrote and profiled safe multithreaded code.
- Agile development experience on studio projects, leading scrums, coordinating with other disciplines and working within a medium-sized team.
- Use of tools including: RenderDoc, PIX Azure DevOps, Jira, git and GitHub, Perforce, Confluence, TeamCity, Premake, PostgreSQL.
- Regular tasks included debugging, low-level optimisation, documentation, high-level architecture, automated testing.
- Created Python tools for non-technical users including Professional Writers, Tech Artists and Environmental Artists, reducing content errors and significantly improving iteration speed and workflow efficiency.

The UK Health Security Agency

Senior Laboratory Scientist and Technical Trainer

Jul 2021 - Mar 2023

- Provided technical leadership to junior scientists on virus inactivation, sample handling (automated/manual pipetting), and quality control protocols based on SOP documentation.
- Knowledge of operating and training users to operate proprietary LIMS.
- Operated automated liquid handling robotics in a sterile, regulated environment (Containment Level 3 laboratory, ISO 35001).
- Worked as an efficient team to process 1,000+ qPCR COVID-19 throat-nasal patient swab tests daily, maintaining accuracy and adherence to strict quality standards.

Technical Skills

- **Programming, Scripting, Other Languages:** C/C++, Blueprint, C#, Python, HLSL, SQL
- **Skills and Knowledge:** Strong Maths and Scientific skills, Object Oriented Programming, Data Oriented Programming, Multithreading, Shader Programming, Design Patterns, Debugging, Profiling and Optimisation.
- **Tools:** Unreal Engine 5, Unity, In-house Engines C++, RenderDoc, PIX, Git, Perforce, TeamCity, Azure DevOps, Confluence, Windows, Linux, Intel VTune, Miro.

Additional Experience - QA Tester

- Performed comprehensive testing across multiple platforms.
- Used bespoke, industry-leading QA tools and bug tracking software.
- Produced high-quality written reports and communicated effectively with multidisciplinary teams.

Education

Game Programmer Apprenticeship

Sumo Digital

- Developed essential C++ skills through multiple projects in Unreal and in-house engines.
- Received excellent training providing foundational low-level game engine knowledge.
- Full C++ coaching, covering everything from proper const usage to advanced template programming

Python Data Science Course

HyperionDev

- Developed knowledge and practice in Python software development, data transformation and visualisation, Machine learning, Natural language processing, Jupyter Notebook, Pandas.

BSc. (HONS) Degree in Chemistry

University of Leicester

- Created affordable atmospheric PM2.5 monitoring instrument and compared collected data to local AURN station. Cleaned and presented data with Python.

Interests

Bouldering, hiking, playing board games, playing TTRPGs, upcycling furniture, being a servant for two cats, videogames, game jams.
